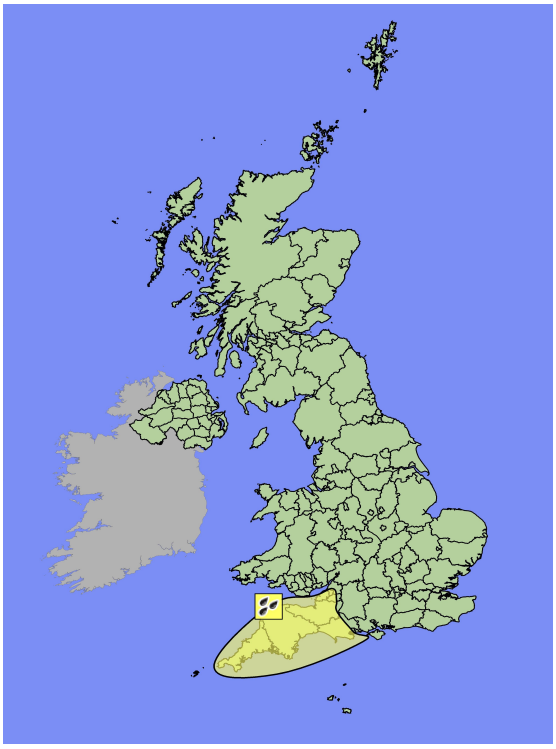
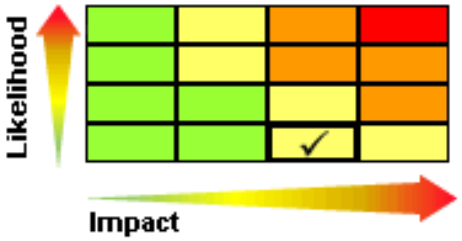
National Severe Weather Warning Service





Chief Forecasters Assessment
On Sunday a developing area of low pressure is expected to track eastwards near to the south of the United Kingdom. However, at present, there remains higher than average uncertainty in the depth and track of this depression and hence both rainfall amounts and how far north any rain will extend. It is possible that 20 to 30mm of rain could fall widely with as much as 50mm over higher ground.

It is expected, as we approach Sunday, that this Alert will be updated and hence the public are advised to keep up-to-date with the forecasts and warnings on this page.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **00:00 on Sun, 14th Oct 2012** until **23:59 on Sun, 14th Oct 2012**

Further rain is possible on Sunday and, although there remains uncertainty in amounts, some of it could be heavy at times. With the ground already saturated in many places the public should be aware that there is a risk of localised flooding and disruption to travel.
